

*The All-in-one Windows to
UNIX Integration Software Solution*

FacetWin[®]

FacetCorp

FacetWin brings all of the resources of your UNIX system into your Windows® environment

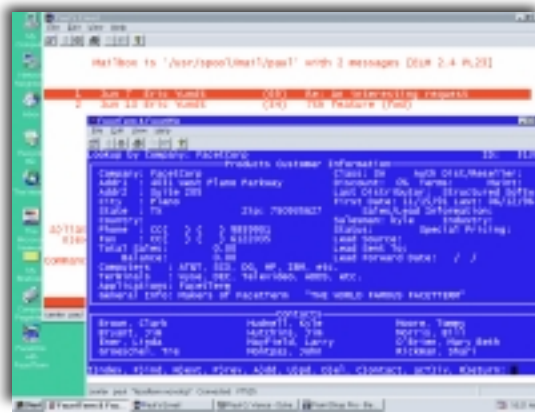

FacetWin provides a complete solution for Windows® to UNIX® integration.

It includes all of the features required to create an easy to use and administer Windows-to-UNIX computing environment:

- Terminal Emulation
- Security Pack Encryption Option
- File Services
- Print Services
- PC Backup/Restore
- PC Agent
- Graphical Administration

All FacetWin features are administered from a single intuitive interface.

Provides access to multiple UNIX applications on one or more servers at the same time.

FacetWin Provides

all that you need to create a transparent PC to UNIX computing environment. Like the ability to share files and printers from anywhere on the network, or to use UNIX applications from your own PC while giving them a native Windows look and feel.

FacetWin is a complete solution, but priced like a single feature product.

Something for Everyone

From a user perspective, FacetWin takes a “Windows-centric” approach, effectively hiding UNIX under the familiar Windows interface.

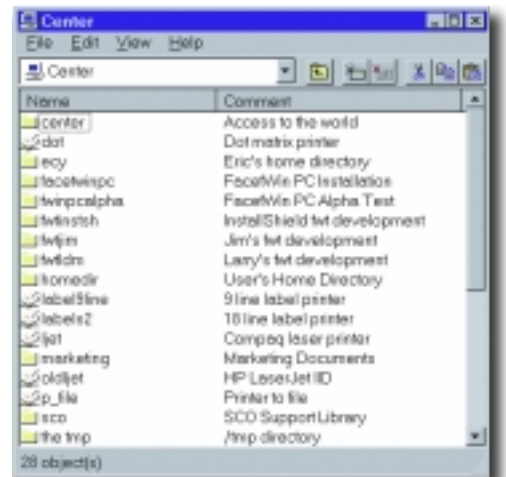

Yet to the system administrator, FacetWin is “UNIX-centric” because of its unique ability to be installed and administered on the UNIX server.

UNIX disks and printers are available through network browsing or mapped drive letters.

Although FacetWin is loaded onto the UNIX server, several features require FacetWin software on the Windows client as well. The features that require FacetWin software to run on both the UNIX server and the Windows client are as follows: terminal emulator, graphical administration, and PC backup/restore.

License Management

- Uses only one UNIX license per PC, regardless of the number of terminal emulation sessions.
- Major releases are “version aware,” allowing you to always run the latest FacetWin software for the release you licensed.

FacetWin[®]

Powerful QuickLaunch™ feature uses “properties” to set up a UNIX application with a Windows icon in 1 minute!

Terminal Emulation

- Terminal Emulations include VT, Wyse, SCO ANSI, and IBM.
- Security Pack Encryption option.
- UNIX applications become part of the user's Windows desktop, appearing as Windows icons and/or items in the Window's start menu.
- Powerful QuickLaunch™ feature uses the Windows “Property” sheet to set up a UNIX application with a Windows icon in just one minute!
- Allows administrator to force user to exit application before exiting the emulator.
- Includes full screen support so FacetWin can be the only application the user sees.
- Unique client/server implementation eliminates need for scripting and reduces UNIX license requirements.
- Copy and paste between Windows and UNIX applications or between two UNIX applications.
- Window Watch™ automatically monitors UNIX applications for activity or specific output.
- Provides a native Windows interface for UNIX applications.

File Services

- UNIX disks are available through network browsing and/or mapped drive letters.
- All file types may be shared, including Windows data files, Windows applications and user profiles.
- Shared file access with complete file and record locking.
- Windows long file names fully supported.
- Supports Windows drag and drop interface, including drag and drop between UNIX servers.
- Support the DOS net time command to allow PC clock synchronization with a UNIX server.

Print Services

- UNIX system printers can be used directly by Windows applications.
- UNIX applications can print to PC printers.

PC Backup/Restore

- Allows the system administrator or individual PC users to backup PC files to a UNIX system on the network.

- Uses Explorer-type PC interface for easy file selection for backup or restore.
- Includes enterprise class features such as full or incremental backup, backup multiple PCs in single operation, data compression, verification, etc.

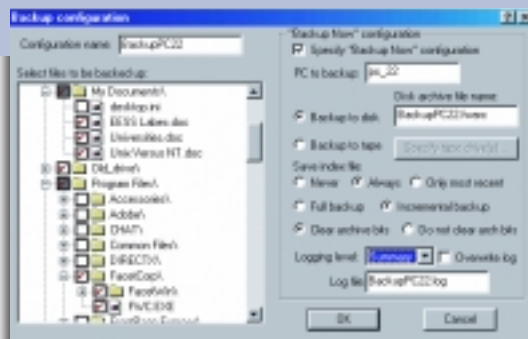

PC Agent

- Messaging service for instant communication from UNIX to the PC users for system administrator and FacetWin server messages.
- Provides graphical user interface to manage PC Backup client settings and to set default UNIX file permissions.

Graphical Administration

- All FacetWin features administered from a single intuitive “properties” interface.
- Provides a single point of administration and control for all FacetWin servers on the network.
- Context sensitive help for every configuration option allows the system administrator to quickly understand and manage the available options.

PC users can select which PC files are to be backed up by using the flexible and easy-to-use PC Agent interface.

FacetWin was developed by FacetCorp—the same company that created the award-winning FacetTerm multi-session software.

FacetWin Server Compatibility

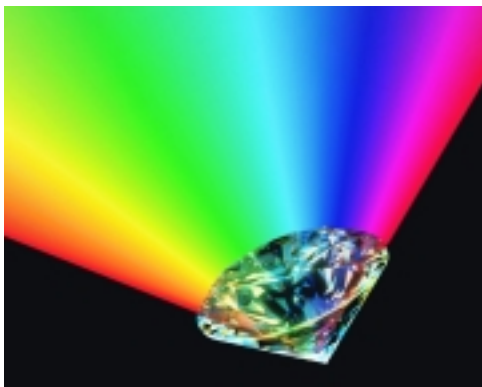

UNIX Platforms Supported	
DG (Intel and Risc 88K)	MIPS ABI
Digital UNIX	SCO
Hewlett-Packard HP-UX	Sequent DYNIX/ptx
IBM AIX	SGI IRIX
Linux	Sun Solaris-Intel
Intel SVR.4 (all)	Sun Solaris-SPARC

Note: Contact FacetCorp for the latest information on UNIX platforms not listed above.

FacetWin Client Compatibility

	Terminal Emulation	File Services	Print Services	PC Backup & Restore	Graphical Admin
Windows XP	Yes	Yes	Yes	Yes	Yes
Windows 2000/2003	Yes	Yes	Yes	Yes	Yes
Windows 95/98/Me	Yes	Yes	Yes	Yes	Yes
Windows 2000/2003 with TSE	Yes	-	-	-	Yes
Windows NT 4.0	Yes	Yes	Yes	Yes	Yes
Windows NT 4.0 with TSE	Yes	Yes	Yes	-	Yes

Note: Contact FacetCorp for the latest information on Windows platforms not listed above.
